

Today Novoselovskyy deposit of glass sand develops CJSC "Novoselovskyy mining and processing plant".

Volume of reserves in these fields compounds 120 million tons, production capacity is 650 thousand tons /year, staff -240 people.

In 2006 we launched a new production line for our new product, quartz sand grade A, which we receives by pulverization of the dry enriched sand with a minimum content of harmful impurities (Fe, Fe₂O₃, Al₂O₃) and high degree of fineness, which is one of the most important quality indicators of raw materials

Joint venture with the world leader in the processing of quartz sand Sibelco (Belgium) was founded on the basis of the plant
